

DISTILLATION AT THE HIGHEST LEVEL

Leading Distillation Technology

A turnkey solution to superior distillate.

Maximize your production of the highest quality distillate without slowing down the process. Available in 5L and 12L options, our distillation system features a modular design with no moving parts, which makes it easy to place into an existing setup.

Thin Film Wipe 4.5 is a closed-loop, continuous, single-pass, fraction distillation system that uses roller technology to separate the cannabinoids and terpenes from crude oil. Roller technology is used to increase the surface area of the solution by spreading it into a thin film on the internal surfaces.

- Closed-loop continuous thin film roller system
- Two heating zone column
- Single multi-pass construction
- Terpene Recapture
- Manual or semi-auto control
- Low maintenance operation

ShortPath is our turnkey fractional distillation system that makes the distillation process virtually effortless. From our specially-designed glassware, vacuum pump, and custom cold trap, we provide everything you need to produce the finest quality distillate down to the last fitting.

- Easy to use and clean
- Superior single-pass distillation
- Clog-proof condenser
- High-purity head
- FDA Compliant (GRAS)
- High potency head
- High reliability
- Three types of heads
- Numerous styles of cows
- Low on condition maintenance

Model	Capacity	Footprint	Fraction Speed up to*	Process Type	Power Requirements
SP5	3L	24" x 24"	400 gm/hr	Batch	46A 120/1/60
SP12	8L	24" x 24"	800 gm/hr	Batch	52A 120/1/60
TFW4.5	N/A	24"x 54"	3500 gm/hr	Continuous	62A 240/1/60

*Results may vary depending on water content, operating parameters, chemical compounds, etc.
